

The *Snow activator* is a system easy to install. You can simply attach it to the water supply for your snow cannon.

The *Snow activator* works without electricity and chemistry. It reduces the surface tension of water by permanent magnetism and rises the viscosity of it.

Because of the changed water structure, deposits at pipes and nozzles diminish. The *Snow activator* extends the duration of life of your machines.

The advantages of *Snow activator.m*

- ✓ better results in producing snow in category temperature
- ✓ dryer snow results in less icing
- ✓ compact snow which is more stable to insolation
- ✓ no harmful lime on nozzles
